January 27th, 1961

Dear John:

Here is the news story about Jessie's work.
Premarin is the only compound that has been found to prolong survival time, except anti-coagulants, for men who have had heart attacks. Premarin cuts the death rate approximately in half!

Mike will write a short speech for you to give on the need for the President to inspire doctors and the people by holding Cancer and Heart Research Conferences. These two disease groups cause 2 out of every 3 deaths today, -this month, and this year, unless more is done to follow the leads we have!

All best wishes,

Yours,

Mary
